Project Part 3

Group 3

Syed Mohamed Yousuf Ismail Maraika - W0837472

Aashish Kurimilla - W0833509

Nrupendra Kumar - W0836757

Chaithanya Keshavabhakthula - W0851954

Sai Anudeep Janapareddy - W0836698

Goal of the survey:

The goal of the survey is to understand the mental health challenges, coping strategies, and support systems of adults. By collecting data on various aspects of mental health experiences, the survey aims to identify prevalent issues, assess overall well-being, and evaluate the effectiveness of existing support mechanisms. This information is crucial for developing targeted interventions and improving mental health resources tailored to the needs of young adults. The survey seeks to gather insights on:

- **Mental Health Challenges:** Identifying specific mental health issues faced by adults, such as anxiety and depression.
- **Coping Strategies:** Understanding how individuals manage stress and their current coping mechanisms.
- **Support Systems:** Evaluating the sources of support that participants rely on, including professional help and personal networks.

Ultimately, the findings from this survey will contribute to a better understanding of adult mental health and inform strategies for enhancing support services in this demographic.

Methodology:

We effectively utilized Google Forms to design our survey and successfully gathered responses from over 50 participants. Once we reached this milestone, we extracted the data into a CSV file for further analysis.

In Python, we undertook a comprehensive data cleaning process, which involved simplifying column names, breaking down specific columns into sub-columns based on participant responses, and organizing the data within the appropriate support column.

Subsequently, we leveraged Tableau to pivot the entire dataset and efficiently filtered out any null values, ensuring a robust dataset for our analysis.

Survey Questions - All questions:

1. What is your current age group?
 - a) 18-24
 - b) 25-34
 - c) 35-44
 - d) 45-54
 - e) 55+

2. What is your primary occupation?
 - a) Student
 - b) Employed full-time
 - c) Employed part-time
 - d) Self-employed
 - e) Unemployed
 - f) Retired

3. Which mental health challenges have you experienced in the past year? (Select all that apply)
 - ☐ Anxiety
 - ☐ Depression
 - ☐ Stress
 - ☐ Sleep issues
 - ☐ Mood swings
 - ☐ None of the above

4. How would you rate your overall mental well-being in the past six months?
 - a) Very Poor
 - b) Poor
 - c) Fair
 - d) Good
 - e) Excellent

5. How comfortable are you seeking professional mental health support?
 - a) Very Uncomfortable
 - b) Uncomfortable
 - c) Neutral
 - d) Comfortable
 - e) Very Comfortable

6. Have you ever sought professional mental health support?
- a) Yes
 - b) No
7. What is your primary source of mental health support?
- a) Family
 - b) Friends
 - c) Professional therapist/counselor
 - d) Online resources
 - e) Support groups
 - f) None
8. How effective are your current mental health coping strategies?
- a) Very effective
 - b) Somewhat effective
 - c) Neutral
 - d) Somewhat ineffective
 - e) Very ineffective
9. What factors do you believe most impact your mental health? (Select top 3 options)
- ☐ Work/school stress
 - ☐ Relationships
 - ☐ Financial concerns
 - ☐ Health issues
 - ☐ Social media
 - ☐ Lack of sleep
 - ☐ Global events/uncertainties
10. How do you typically manage stress? (Select at most 3 options)
- ☐ Exercise
 - ☐ Meditation/mindfulness
 - ☐ Talking to friends/family
 - ☐ Hobbies
 - ☐ Professional help
 - ☐ Medication
11. Please indicate your level of agreement with the statement: "Mental health is as important as physical health."
- a) Strongly agree
 - b) Agree
 - c) Neutral
 - d) Disagree
 - e) Strongly disagree

12. What additional support would you find most helpful in improving your mental well-being?
(Short answer)

Insights and Conclusion:

Insights: The majority of respondents are students, with 22 out of the total respondents identifying as such. This highlights that the survey primarily captures the perspectives of the younger adult demographic.

Most respondents rated their overall mental well-being in the past six months as either "Fair" or "Good," representing 30.77% of the responses. This suggests that many individuals view their mental health as moderate, neither excellent nor poor.

"Sleep issues" were identified as the most commonly reported mental health challenge, with 29 responses, indicating it's a significant concern among the respondents.

Furthermore, the majority of respondents feel comfortable seeking professional mental health support, with 15 indicating they are "Comfortable." Despite this, a significant majority (65.38%) have never sought professional support, highlighting a potential gap in mental health care utilization within this population.

"Financial concerns" are seen as the most significant factor impacting mental health, as indicated by its prominent size and colour in the survey results.

Family serves as the primary source of mental health support for most respondents (18 out of 52), underscoring the vital role that family plays in mental health support systems.

Interestingly, the largest group of respondents (34.62%) feel neutral about the effectiveness of their mental health coping strategies, suggesting a notable portion may not have strong opinions or feel ambivalent about their current coping methods.

In terms of stress management, talking to friends or family emerged as the most common approach, indicated by the largest bubble representing 27 responses. This highlights the crucial role of social support in managing stress.

Additionally, the majority of respondents (24 out of 52) strongly agree that mental health is as important as physical health, reflecting a high recognition of mental health's significance.

Finally, "Family" is the most frequently mentioned source of support for improving mental well-being, evidenced by its larger font size compared to other words in the survey results.

Conclusion: The survey primarily reflects the perspectives of young adults, particularly students, who generally rate their mental well-being as fair to good. Sleep issues emerge as a prevalent mental health challenge, while financial concerns are perceived as the most significant factor impacting mental health.

Despite feeling comfortable seeking professional support, there's a notable gap in the actual utilization of mental health services. Family plays a crucial role, serving as both the primary source of mental health support and a key stress management strategy. This underscores the importance of social support networks in maintaining mental well-being.

There's a strong recognition of mental health's importance, with most respondents equating it to physical health. However, many feel neutral about the effectiveness of their coping strategies, suggesting a potential need for more effective mental health management tools and education.

These findings highlight the complex interplay between various factors affecting mental health in this demographic, emphasizing the need for comprehensive, accessible mental health support systems that leverage existing social structures while addressing barriers to professional care.

Future Recommendations:

Future Recommendations for the survey on mental health challenges, coping strategies, and support systems of adults:

1. Consent Form:
 - Include more detailed information about data retention and deletion policies.
 - Add a section on how participants can access the study results.
 - Include a statement about the possibility of future related studies and whether participants can opt-in to be contacted.
2. Survey Questions:
 - Add a question about gender identity to understand demographic factors better.
 - Include a question about cultural background to explore potential cultural influences on mental health.
 - Add a question about access to mental health resources in the participant's area.
 - Include a question about the impact of social media on mental health.

3. Answer Options:

- In questions about coping strategies, include more modern options like "Using mental health apps" or "Online therapy."
- For questions about comfort levels, consider using a 7-point scale instead of a 5-point scale for more nuanced responses.
- In questions about mental health challenges, include options for less common but significant issues like eating disorders or substance abuse.

These recommendations aim to enhance the survey's comprehensiveness, clarity, and relevance, potentially leading to more insightful and actionable data for improving mental health support for adults.
